

Making Workspace Safe

Helping building owners and occupiers to develop and implement the right **Building Works** to adapt, improve and make their workspaces safe to reopen in response to the COVID-19 pandemic.

Helping you develop and implement the right building works for a safe return to operations

The COVID-19 pandemic has significantly disrupted normal business, how we work, and will affect how we use buildings in the future.

Occupiers and business owners must prepare and adapt for a changing working world. It is now the right time to assess, develop and implement the right **building works** for your business reopening after COVID-19, in line with the UK Government's recently published guidance to get back to business.

The two key areas of change that need to be implemented for the safe reopening of your business are both Behavioural and Environmental.

Behavioural change requires your business operational practices to adapt to stricter H&S and Social Distancing policies. The Environmental change – the physical space of your building – requires the **assessment, identification and implementation of adjustments to key building facilities and services** such as circulation flows and safe routes, designation of safe zones and secured areas, general security, building air tightness, adjustments and improvements to ventilation systems, and the implementation of new IT systems to offer the much needed safe environment.

At Alrimo Construction Ltd, we are here to support your business for a strong and better controlled head start.

A Safe Return to Business is a Matter of Trust

Both your Clients and Staff will be nervous about coming back to your office facilities and being in close contact with others. How you assess, identify and implement building adaptations **to open your workspaces safely is vital to build the trust of your Staff and Clients** and get their support in making the return to your business operations a success.

From the moment your Staff and Clients step over your workspace threshold, passing through your reception, circulating through your building and travelling via lift or stairs to access building facilities; it is essential to provide them with the confidence that you have made the necessary adaptations to your building space to offer them the safest possible environment.

Whether the building adaptations required would be straight forward or more complex in nature, the Alrimo Professional and Technical Design & Construction Teams will be able to provide you with the right support to arrive at the right and most cost-effective solution.

We are a Design and Build Contractor with extensive experience in the design and construction of a wide range of building uses. We offer our Clients a One-Stop Shop design and build solution to provide you best value to the adaptations that will need to be made for a safe return to business operations.
